EDUCATION

University Of Western Ontario *London, ON*

Bachelor of Computer Science

Expected Graduation

EXPERIENCE

DevOps Engineer Intern *Present – Present*

Leavoda Technologies *Quebec, ON*

- Built and supported production-grade cloud applications in Linux environments
- Developed CI/CD pipelines using GitHub Actions, Jenkins, and Azure DevOps
- Deployed and monitored services across Azure and AWS environments
- Debugged system, container, and cloud integration issues
- Collaborated with cross-functional teams to resolve defects and optimize delivery pipelines

UX/UI & Software Developer Intern *September 2025 – January 2026*

A-Zone Gaming *Toronto, ON*

- Developed JavaScript and React-based applications used in production
- Integrated REST APIs and validated functionality through testing
- Participated in Agile sprints, code reviews, and feature testing
- Improved stability and performance through issue reproduction and fixes

Frontend/Software Developer *May 2025 – August 2025*

Sai Dham Food Bank *Brampton, ON*

- Built and deployed user-facing software for real operational use
- Performed regression testing and post-deployment debugging
- Improved accessibility, performance, and system reliability

HR/IT Intern *April 2024 – August 2024*

PCHS *Brampton, ON*

- Supported internal software systems and performed hands-on troubleshooting
- Assisted with hardware setup, system verification, and secure access controls

PROJECTS

Internal Developer Platform & Tooling System

- Built an internal developer platform to support service configuration, monitoring, and automation
- Developed ASP.NET Core REST APIs for managing service metadata and deployment status
- Designed relational schemas in PostgreSQL and implemented data access layers
- Containerized backend services using Docker and deployed to cloud environments
- Implemented logging, error handling, and basic automated tests to improve reliability
- Focused on developer productivity, maintainability, and internal tooling workflows

IT Asset Management & Deployment Workflow System(Mac/Windows Imaging, Hardware Tracking, AV Setup)

- Implemented AI-assisted Python scripts to analyze wellness metrics, generate natural-language summaries, create accessible visualizations, and automate IT asset documentation, improving deployment accuracy by 30%

HR Integrations & Data Sync Microservice (Go, Python, GCP, Docker, Kubernetes)

- Designed and implemented a simulated HRIS/Employee-sync microservice in Go, enabling reliable user data synchronization via GCP Pub/Sub with validation pipelines, retry logic, rate-limiting, Docker containerization, and automated Go tests, deployed on Minikube Kubernetes cluster.

Next.js Health & Wellness Dashboard (Next.js 14, React, Typescript, Node.js, Tailwind, Vercel)

- Built a modular health dashboard tracking prescriptions and appointments using server actions and secure authentication, ensured WCAG AA compliance with keyboard navigation and aria-live regions, improving accessibility and performance.

Enterprise AI Knowledge Assistant(Python, Azure OpenAI, LangGraph, Vector DB)

- Built RAG-based natural-language search over enterprise documents by implementing summarization, data chunking, and evaluation techniques, enhancing model reliability and improving information retrieval accuracy by 30%.

Retail Inventory Monitoring & Alerting System(Java, Spring Boot, Docker, Node.js, React)

- Engineered a full-stack Walmart-style inventory system with real-time alerts and anomaly detection, developed Spring Boot microservices for SKU tracking, containerized with Docker, and automated latency and error dashboards.

Vehicle Telemetry & Diagnostics Platform (Python, Java, REST APIs, Docker, AWS, React)

- Built a vehicle telemetry ingestion and diagnostics system simulating EV data streams, implemented backend services to process vehicle state and sensor data, and designed REST APIs, improving monitoring efficiency by 30%

Real-Time Customer Support Dashboard (Vue.js, WebSockets, Node.js, AWS)

- Engineered a real-time customer support dashboard with Vue.js and WebSockets, delivering live communication updates, scalable Node.js backend, and Docker-AWS deployment supporting 500+ concurrent users.

HighVibeChat (WebRTC Platform)

- Developed real-time WebRTC communication with Node.js and custom signalling, documented architecture and debugging processes, enhancing platform reliability and reducing system downtime by 30%.

SKILLS

Languages: C#, Java, Python, JavaScript, TypeScript, C++, Bash

Frameworks/Tools: .NET 7+, ASP.NET Core, RESTful APIs, OOP, Middleware Concepts, React, HTML, CSS, PostgreSQL, SQL, GCP, Azure, AWS, Git, Docker, GitHub Actions, Jenkins, Azure DevOps, Linux

Foundations: Data Structures, Algorithms, Software Design, Testing & Debugging

Backend & Systems: REST APIs, Linux, OOP, Multithreading (basic), Middleware Concepts

Mobile & Frontend: React, HTML, CSS

Cloud & Platforms: Azure, AWS, Azure OpenAI

DevOps & Tooling: Docker, GitHub Actions, Jenkins, Azure DevOps, Git, Linux

Databases: SQL, Azure SQL, NoSQL

IT Support: Hardware troubleshooting, system setup, patching, log analysis

Productivity Tools: Microsoft Word, Excel, PowerPoint, Outlook

Collaboration: Microsoft Teams, SharePoint

AI Tools: ChatGPT, Microsoft Copilot

Networking Basics: TCP/IP fundamentals, system connectivity concepts
