EDUCATION

Western University

Bachelor of Computer Science

London, ON

Expected 2027

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C, C++, SQL, C#, HTML5, CSS, Bash

Backend & APIs: FastAPI, Node.js, REST APIs, client-server architecture, API design, data validation, background jobs

Web & Product: React, Next.js, Firebase, responsive UI, reusable components, accessibility-aware interfaces, UX iteration

Data & Systems: PostgreSQL, MySQL, data modeling, query debugging, concurrency, queues, caching concepts, Linux/Unix

Quality & Tooling: Git, Docker, GitHub Actions, CI/CD, Pytest, regression testing, debugging, Agile, code reviews

EXPERIENCE

D2L

Product Support Analyst Intern

Kitchener, ON

May 2026 – Present

- Diagnosed production SaaS issues across **permissions, configuration, database records, workflows, and platform behavior** before escalation.
- Improved engineering handoffs by capturing **reproduction steps, timestamps, environment details, user impact, and technical evidence**.
- Built support judgment in a live customer environment by separating product defects, data issues, user error, and expected system behavior.

Leavoda Technologies

Software Engineering / DevOps Intern

Remote

Jan 2026 – Apr 2026

- Reduced release risk by strengthening **CI/CD validation gates** that surfaced build, configuration, and integration failures before deployment.
- Debugged application instability across **Linux logs, shell scripts, API dependencies, environment variables, and deployment configs**.
- Improved maintainability by separating runtime configuration from application logic, making releases easier to test, review, and roll back.

A-Zone Gaming

Software Developer Intern

Toronto, ON

Sept 2025 – Dec 2025

- Reduced avoidable request latency by **35%** by profiling slow data paths, removing duplicate client requests, and tightening API handling.
- Cut data consistency defects in concurrent user flows by strengthening validation, state handling, and backend source-of-truth checks.
- Shipped reusable **React/JavaScript** components while coordinating API contracts, edge cases, and regression checks for user-facing flows.

Sai Dham Food Bank

Software Developer Intern

Toronto, ON

May 2025 – Aug 2025

- Cut recurring reporting time from **4 hours to 20 minutes** by replacing spreadsheet-heavy workflows with reusable **Python/SQL** automation.
- Improved reporting accuracy by validating required fields, normalizing inconsistent records, and flagging malformed entries before export.
- Reduced manual audit effort by documenting data assumptions, edge cases, and update steps so staff could reproduce reports consistently.

PROJECTS

HighVibeChat | React, TypeScript, Firebase, Node.js, API Design

2026

- Built a real-time AI texting platform with **client-server message flows**, authenticated sessions, and production-deployed web UI.
- Designed reusable chat components, input validation, and Firebase-backed state handling to support reliable user-to-agent conversations.
- Improved product usability through fast UI iteration, clearer onboarding flows, and reduced friction from first visit to active conversation.

Manufacturing Workflow Automation System | Python, FastAPI, PostgreSQL, Celery, Docker, Pytest

2026

- Built an **event-driven backend** that reacts to downtime, defect spikes, and bottlenecks with automated workflow decisions.
- Modeled work orders, stations, cycle time, throughput, downtime, and defect KPIs to support reporting and bottleneck detection.
- Added **Pytest** coverage for APIs, workflow rules, and failure cases to reduce backend regression risk before changes shipped.

Personal Productivity Sync Engine | Swift, SwiftUI, FastAPI, PostgreSQL, REST APIs

2026

- Designed an **iOS-style productivity app** with offline-first task capture, conflict-aware syncing, and clean client-server API boundaries.
- Implemented backend endpoints for task creation, updates, filtering, and sync metadata with validation for malformed and duplicate requests.
- Prioritized Apple-style product quality by balancing responsive UI, reliable persistence, simple interactions, and testable architecture.
